

**Citrix Hotkeys.**

The Citrix Win32 Client provides hotkeys that can be used to control various functions while in a Win32 Client session. Some hotkeys control the behavior of the Win32 Client itself, while others emulate standard Windows hotkeys.

**\*\*Please Note: These Hotkeys only pertain to PC's. They do not work on WYSE terminal machines.**

HOTKEY	ACTION PERFORMED
SHIFT+F1	The Task List hotkey displays the local Windows Task List for Windows NT 3.51 client computers or the local Start menu for Windows NT 4.0 or Windows 95 client computers.
SHIFT+F2	The Toggle Title Bar hotkey causes the Citrix ICA Client window to display or hid its Windows title bar.
SHIFT+F3	The Close Remote Application hotkey disconnects the ICA session and exits the ICA Win32 Client. Using this hotkey either leaves the associated application in a disconnected state on the Citrix server or exits the application on the Citrix server, depending on how the application is configured.
CTRL+F1	Sends the standard Windows CTRL+ALT+DEL hotkey to the Citrix server running the remote application. This hotkey displays the Windows NT Security desktop in the ICA session.
CTRL+F2	Sends the standard Windows CTRL+ESC hotkey to the Citrix server running the remote application. When using this hotkey during an ICA session on a WINFRAME server, the remote Task List appears. For MetaFrame ICA sessions, the remote Windows NT Start menu appears.
ALT+PLUS	Sends the standard Windows hotkey ALT+TAB to the Citrix server running the remote application. Use this hotkey to cycle through applications that have been opened in the ICA session. A popup box appears and displays the programs as you cycle through them.
ALT+MINUS	Sends the standard Windows ALT+SHIFT+TAB hotkey to the Citrix server running the remote application. Like the ALT+PLUS hotkey, this key sequence cycles through applications that have been opened in the ICA session but in the opposite direction.
